Mira Costa – *Pre Med*– 2018 to 2020

University of California San Diego – *Full Stack Coding Bootcamp*–Currently Enrolled

Skills

- JavaScript, HTML, CSS, React, Node.js, jQuery, MySQL, Git, Mongo
- Administrative and team leadership
- Learning Python

Academic Experience

Price Analysis App: A web based application to compare the pricing of identical or similar items between two major online retailers. The goal was to utilize available web API's and pull the information to the app in a readable, and useful format. Working in a team of four, we successfully created our application, and ran into some meaningful challenges while working with a third party API. My role was to connect the backend to the front end, as well as oversee pushes and merges to Github.

PetConnect.com: Working with a team, we developed a site that served as a social platform for dog breeders and buyers, which would eventually become a marketplace platform. My roles were to create routes as well as to direct the resources of the team to ensure a timely execution. I also worked QC, to ensure that the site functioned properly.

Work Experience
